

Mission Statement

Excalibur Screwbolts are a British manufacturing company, designing and producing high-performance Screwbolts for engineering and construction clients across a wide range of projects all around the world.

Excalibur's dedicated and passionate team work extremely hard to deliver joint commercial success and to ensure quality products and exemplary customer service lie at the heart of our operation. The company is managed by our founder, Charles Bickford, who designed and invented the original Excalibur Screwbolt twin helix anchor for all substrates.

The factor that sets us apart from our competitors remains our originality; whilst many 'copycat' products have appeared on the market, we are the original inventors of the revolutionary Screwbolt.

As a company we pride ourselves on continuous development and producing the best multi-application Screwbolts there are on the market. Testament to our success is their use in landmark engineering projects from the Channel Tunnel Rail Link (HS1), Crossrail, the Northern Line Extension, Tideway & HS2.

Excalibur's British heritage remains important to us, and we believe British designed and manufactured products are amongst the best in the world.

New major global engineering projects are requiring more innovative solutions and Excalibur are committed to reinventing and growing our product range by developing new fixing solutions for many different market sectors/applications.

Excalibur remains focused on being the market leader with an enduring reputation through the 21st Century. Our mission is to continue to provide the highest quality, most reliable fixings to be used in any engineering or construction projects, wherever the location, whatever the material, whatever the challenge.
